

QUALITY AND SAFETY POLICY

The Management of ROTAIR SpA, in relation to its activities both within the company and outside, establishes for the Management System for Quality and Safety, described in the corporate context and practices resulting from it, the following objectives:

- a) concentrate their efforts on the implicit and explicit needs of the customer, to ensure full coverage every day and be the supplier of reference;
- b) determine the risks that should be addressed and the opportunities to be seized to ensure that the system will achieve the expected results, preventing possible situations of non-compliance and / or dissatisfaction of internal and external customers and increasing the desired effects by management;
- c) maintaining labor standards comply with the legal requirements concerning health and workplace safety;
- d) identify methodologies and innovative and advanced services that enable to minimize product costs, adapting to technological development and market demands in a climate of constant collaboration with the customer;
- e) attracting new customers in the commercial network, defining significant commercial contracts;
- f) optimize the production process with interventions which limit wastage of time in the work changes, rearranging work areas with the provision of new equipment and realizing expansions of local and structural changes;
- g) ensure the reliability and quality of checks and tests in relation to the Directive 2000/14 / EC.
- h) Identify the laws, regulations and requirements applicable.
- i) The choice of the measures taken for the elimination / reduction of risks takes into account, where applicable, the following hierarchy:
 - ✓ Elimination of the hazard
 - ✓ Replacing what is dangerous with what is not dangerous or is less so
 - ✓ Technical measures (eg. isolation of the area exposed to danger, in the safety management of the electric current, etc.).
 - ✓ Measurements of organizational type (eg. Rostering exposed personnel, special training for the exposed personnel, access regulation in certain areas, etc.).
 - ✓ Put up the safety signs, warning
 - ✓ Procedures or specific work instructions
 - ✓ Use of Personal Protective Equipment (PPE)

In this sense the Management is committed to:

1. spread in Rotair Spa the culture of quality and safety;
2. keep active the Management System for Quality and Safety made in compliance with UNI EN ISO 9001: 2015 and OHSAS 18001: 2007;
3. ensure an adequate level of competence and knowledge of the resources, through targeted training and information systems for the integrated management of processes;
4. involve staff at all levels in the constant application of the system for the management of the Quality and Safety;

ROTAIR Spa, therefore, considers its Quality System and Security as the most effective tool to achieve the involvement of staff and improvement of its processes. Furthermore, the organization bases its operating decisions on the principles towards customers, reliability in the delivery of its services and compliance with all contractual requirements, legislation and regulation.
